

Quick Facts

- 🌐 TAAT Clearinghouse integrated 71 technologies into 21 large-scale agricultural investment projects financed through the AEFPP across 24 countries, influencing \$857 million.
- 🌐 \$4.1 million allocated to TAAT Compacts by Regional Member Countries to ensure effective implementation support for AEFPP projects
- 🌐 175 cases of TAAT vetted technologies were integrated into approved national and regional agricultural investment projects financed by African Development Fund (ADF) sovereign loans and grants, as well as projects financed by other IFIs such as IsDB in 21 large-scale agricultural investment projects across 26 countries, influencing \$3.2 Billion
- 🌐 Mobilised \$50.1 million as funding for TAAT compacts' implementation support to AfDB ADF-financed projects.

Engaging Countries ... Transforming Food Systems

With its integration into the CGIAR Scaling for Impact programme, the TAAT Clearinghouse will make proven technologies usable at scale, validating and packaging them with complementary innovations, and linking them to large public investments and agricultural delivery systems. TAAT is now positioned to connect innovations to a US\$1.5 billion AfDB-backed portfolio in 2026, expected to benefit 3.4 million additional smallholder farmers.

Dr. Timothy J Krupnik
Director, CGIAR Scaling for Impact Programme

Country Engagement by Technologies for African Agricultural Transformation (TAAT)

- The TAAT Clearinghouse (TAAT-CH) leads the brokerage of productivity-enhancing technologies, ensuring their integration into large-scale agricultural investment programs and projects, funded by AfDB and other International Finance Institutions.
- This is achieved through “Country Engagement” where TAAT mobilises technology developers to participate in project design, supervision, evaluation and restructuring missions to countries across Africa
- Through Country Engagement, TAAT presents compelling value propositions of its vetted technologies and technical assistance to decision-makers and government officials, which facilitates the integration of these technologies and technical assistance into regional and national large-scale agricultural investment projects.
- TAAT Country Engagement is thus a strategic approach, which enables millions of farmers access proven agricultural technologies that offers them the possibility of increasing productivity, build resilient and climate-adaptive food systems, and increase household incomes in low-income countries across Africa.
